

Faruk, আমি তোমার জন্য **Django REST Framework (APIView) Detailed Guide** PDF কে update করেছি যাতে structure আরও readable এবং step-by-step A-Z style।

PDF-এ থাকবে:

1. API Policy Attributes

- 2. `renderer_classes`: API response format (JSON, HTML) → client অনুযায়ী adjust করার জন্য
- 3. `parser_classes`: client থেকে data parse (JSON, form-data) → বিভিন্ন request handle করার জন্য
- 4. `authentication_classes`: user verify → unauthorized access block
- 5. `permission_classes`: API access control → security নিশ্চিত
- 6. `throttle_classes`: request limit → API abuse prevent
- 7. `content_negotiation_class`: client চাওয়া format detect → automatic response select

8. Instantiation Methods

- 9. `get_renderers()`: renderer instance তৈরি
- 10. `get_parsers()`: parser instance তৈরি
- 11. `get_authenticators()`: authentication load
- 12. `get_permissions()`: permission object তৈরি *Purpose*: Static config থেকে dynamic object create করার জন্য

13. Implementation Methods

- 14. `check_permissions(request)`: permission check → unauthorized user block
- 15. `check_throttles(request)`: request limit check → API misuse prevent
- 16. `perform_content_negotiation(request)`: response format decide → client-friendly response

17. Dispatch Flow

- 18. `initialize_request()`: HttpRequest → DRF Request (extra features: data, auth, parser)
- 19. `initial()`: handler run আগে check → authentication, permission, throttle, content negotiation
- 20. handler methods (get, post, put, delete): main logic run
- 21. `handle_exception(exc)`: error handle → clean response
- 22. `finalize_response()`: final response render & send to client

23. Summary

- 24. Attributes = Configuration
- 25. Methods = Execution Flow
